

Manage units. Empower real estate.

The definitive product document for Mimarek — a Saudi-first PropTech platform that runs the entire property lifecycle on one compliant system. Repo-grounded product truth, executive narrative, and build-ready requirements in a single source.

Status

Production-ready · pre-commercial-launch

Scope

Sales · rentals · finance · CMMS · B2B marketplace

Readers

Leadership · GTM · product & engineering

Prepared

28 June 2026

A complete product, hardened and waiting on go-to-market.

Mimarek (v5.13.0) is feature-complete across the property lifecycle, security-hardened through a 19-finding audit sweep, and built Arabic-first for the Saudi regulatory environment. What it does not yet have is customers — it is pre-launch by choice, not by limitation.

14

Shipped modules, lead → maintenance

9

Roles across platform / tenant split

AES-256

PII encrypted at rest + blind-index search

ZATCA

Phase-2 e-invoicing engine, in-house

What this means

The engineering risk of a compliant Saudi PropTech system is retired. What remains is commercial: deployment, pricing, positioning, and the regulated go-lives (production ZATCA, marketplace conveyance) that need external sign-off — not code.

How to read this

Every capability carries a status tag. Nothing is aspirational unless labelled. Figures inside screenshots are illustrative demo data, not business metrics — real traction and pricing are marked founder-input.

● Shipped — in code

● Gated — built, off by flag / sign-off

● Planned

● External evidence

● Placeholder — founder input

منتج مكتمل وجاهز للتشغيل، بانتظار التسويق والمبيعات.

معمارك منصة سعودية متكاملة لإدارة دورة حياة العقار – من العميل المحتمل إلى الحجز والعقد والتحصيل والصيانة – مبنية أصلاً للسوق السعودي ولغته ولوائحه. المنتج اليوم مكتمل المزايا وجاهز للتشغيل (الإصدار 5.13.0): تحصيل ذكي للإيجارات، وإدارة للمبيعات والعقود، وفوترة إلكترونية متوافقة مع هيئة الزكاة والضريبة والدخل (المرحلة الثانية)، وسوق عقاري بين المنشآت، ولوحات تنفيذية مخصصة لكل دور.

البيانات الحساسة مشفرة بمعيار [AES-256-GCM](#)، والوصول محكوم بفصل صارم بين فريق المنصة والعملاء عبر تسعة أدوار وصلاحيات دقيقة، مع عزل كامل لبيانات كل منشأة. النظام عربي أولاً بواجهة كاملة من اليمين إلى اليسار. لم يُطلق المنتج تجارياً بعد؛ تصف هذه الوثيقة الحالة الراهنة تمهيداً لبناء استراتيجية التسويق والمبيعات. الأرقام في اللقطات بيانات توضيحية وليست مؤشرات أداء حقيقية.

١٤ وحدة جاهزة

The Mimarek identity — modern, modular, data-driven.

The visual system every Mimarek surface and document is built on: one logo system, a disciplined palette, and two typefaces. Consistency protects recognition — always apply the identity with clarity, balance, and discipline.

Logo system

Primary — stacked

Horizontal — bilingual

Icon-only mark

Reverse — on dark

Clear space = the height of the cyan square in the icon, on all sides. Minimum size: 120 px digital / 20 mm print for the full lockup, 32 px for the icon. Never stretch, recolor, rotate, add effects, or rearrange the locked elements; use the reverse lockup on dark backgrounds.

Color palette

#0D1B2A

Deep Navy • 60%

Foundation, primary type, headers, structure

#00707A

Teal • 20%

Professionalism, balance — CTAs, links, icons

#14C0C0

Bright Cyan • 10%

Action & emphasis — highlights, data accents

#E6F7F6

Light Cyan • 5%

Backgrounds, surfaces, subtle accents

#A6B2C3

Gray Blue • 5%

Borders, dividers, muted text, neutral balance

Color roles & rules

Deep Navy carries primary typography, navigation, and structure. Teal and Bright Cyan drive action and highlight key information — use for buttons, links, icons, and data accents, with cyan used sparingly. Light tones support clarity and create breathing room. **Do** maintain strong contrast for readability and accessibility. **Don't** overuse bright accents or introduce colors outside the palette. The logo mark uses its own fixed tones (#031630 / #008d9a) and is never a UI color.

Typography

Mimarek

Satoshi — English & UI

Modern, geometric sans-serif with excellent clarity and neutrality. Used for all Latin text, numbers, and interface copy.

Light Regular Medium **Bold**

معمارک

Tajawal — Arabic

Contemporary Arabic typeface with high readability and balanced forms. Used for all Arabic content, RTL-first.

خفيف عادي متوسط عريض

Type hierarchy

Manage every unit with clarity.

H1 · Satoshi Bold · 40/44

Smarter decisions. Better performance.

H2 · Satoshi Medium · 24/32

Body text — concise, left-aligned, 45—75 characters per line for comfortable reading.

Body · Satoshi Regular · 16/24

Caption · metadata, timestamps, helper text.

Caption · 12/16

Visual principles

Clean & modular

Remove noise; build from a simple geometric system. Thin dividers, rounded square modules, generous whitespace.

Data-driven & high-contrast

Visuals communicate insight and performance. Keep strong contrast; use cyan only for actions and accents.

Aspirational imagery

Modern architecture (bright, clean), insight-led dashboards, and clean structured UI cards.

One operating system for the property business — Saudi-native, not Saudi-translated.

Lead marketing with the differentiators; the baselines are table stakes.

Mimarek replaces spreadsheet-and-WhatsApp coordination of a developer's sales, leasing, finance, and maintenance teams with one tenant-isolated system where a customer entered once flows from lead → reservation → contract → rent installment → receipt without re-keying.

Baseline expectations

● table stakes

- **Arabic-first & RTL** — expected of any 2026 Saudi product.
- **Responsive & secure access** — desktop, tablet, mobile.
- **Role-based dashboards** — CFO and leasing agent see different things.

Differentiators

● where we win

- **Compliance-native workflow fit** — ZATCA, Absher fields, Ejar/REGA hooks built into the lifecycle.
- **Enter a customer once, reuse everywhere** — one record powers CRM, contracts, finance, maintenance.
- **Cross-org B2B marketplace** — trade units between organizations with deed-transfer settlement.
- **Encrypted customer data by default** — searchable blind indexes, audit trail, tenant isolation.

Deliberately out of scope. Pure property management — not an off-plan/project-launch platform, not a public consumer listings portal, not an accounting general ledger. It connects to those; it doesn't replace them.

Regulation is forcing Saudi real estate onto compliant software — now.

External, defensible drivers. Market-size figures are left as founder/analyst input, not invented here.

ZATCA Phase-2

Mandatory e-invoicing (Fatoora) rolls across VAT-registered businesses in waves. Operators issuing rent and sale documents need a cleared, compliant path — Mimarek has the engine in-house.

Ejar & REGA

Rental contracts route through Ejar; brokerage and advertising fall under REGA licensing. Saudi PropTech must speak these systems to be credible.

Vision 2030 & PDPL

Sector digitization plus the PDPL / NDMO data-governance regime reward systems that encrypt, audit, and localize customer data by design.

The timing argument

Compliance deadlines convert "nice-to-have software" into "required infrastructure." A product already compliant when the operator must act has a buying-window advantage over generic CRMs and foreign property tools that are not Saudi-native.

Who buys, and who sits in each seat.

Two universes that never share surfaces or data: the platform team that operates Mimarek, and the customer organizations that run their property business inside it.

Platform tier — Mimarek staff

SYSTEM_ADMIN

Platform Admin

Operates the product: tenants, plans, billing, coupons, ZATCA platform onboarding, marketplace moderation, data-retention policy.

SYSTEM_SUPPORT

Platform Support

Cross-tenant support: tickets, account help, ZATCA clearance ops. Broad permissions for support tooling, blocked from tenant business data by the audience guard.

Tenant tier — the customer organization's seats

ADMIN

Org Owner / Admin

The buyer's decision-maker.
Full control: team, settings, every module, ZATCA config.

MANAGER

Property / Sales Manager

The "units admin" + sales-management seat:
properties, deals, contracts, leases, reports, marketplace publish & convert.

AGENT

Sales Agent

Pipeline execution: leads, customers, deals, contracts, payment recording. No exports, no PII reveal.

LEASING

Leasing Officer

Rentals: leases, reservations, renewals, customer records with PII access.

FINANCE

Finance / Accounting

Money seat: payments, billing view, reports, ZATCA tax config.

TECHNICIAN

Maintenance Technician

Field seat: assigned work orders and preventive tasks only — no financial or customer data.

USER

Basic User • buyer / tenant

The end-user persona: dashboard, notifications, help.

B2B • cross-org

Seller ↔ Buyer org

In the marketplace, organizations act as seller (publish) and buyer (inquire → convert → conveyance), with a platform moderator between them.

The access model is a sales asset — not fine print.

Simplified from ~60 permissions in `lib/permissions.ts`. PII read is gated separately from record read.

Capability	Admin	Manager	Agent	Leasing	Finance	Tech	User

Audit log	●	—	—	—	—	—	—

↔ Scroll the table horizontally

● full • ⦿ read/partial • — none. Platform roles (`SYSTEM_ADMIN`, `SYSTEM_SUPPORT`) get broad permissions for support tooling but are **blocked from all tenant business data** by a Layer-3 audience check — permission alone never grants tenant access.

Every surface has a guard.

Derived from `lib/route-guards.ts` — the single source for route → permission + audience. Tenant and platform surfaces never overlap.

<code>/dashboard/admin/**</code>	Platform	isSystemRole + per-area (billing:admin, zatca:admin, marketplace:moderate)

↔ Scroll the table horizontally

One customer record flows from lead to receipt — screen by screen.

Each step is a working surface today; captions state the business outcome. *All figures are illustrative demo data.*

1 • Role dashboard

See the business in ten seconds.

A North-Star metric plus reservations, signed contracts, overdue payments, portfolio size, and open maintenance — with a date range and pending-actions queue. Each role lands on the dashboard built for its job.

/dashboard

2 • CRM pipeline

Move a lead to a signed deal without losing it.

A Kanban pipeline with per-customer activity timeline, agent assignment, and a deliberate "Show PII" gate — sensitive identity stays masked until a permitted user reveals it.

6 • Maintenance (CMMS)

Catch SLA breaches before the tenant escalates.

Work orders by category and priority with assignment and cost tracking, plus preventive-maintenance plans that auto-generate recurring work orders.

/dashboard/maintenance

7 • Finance dashboard

Control receivables risk by aging bucket.

Collection rate, total AR, overdue, and AR-aging, with on-demand revenue / occupancy / collection reports exportable to PDF and Excel.

/dashboard/finance

8 • Platform administration

Run the SaaS business itself.

A separate platform-staff console: ARR / MRR, ARR waterfall, AR aging, ZATCA clearance rate, trial-to-paid, plan/coupon management, marketplace moderation, and PDPL data-retention.

/dashboard/admin · SYSTEM_ADMIN

Build-ready requirements, by workflow.

Each requirement is testable and carries a priority (Must/Should) and status. These are the execution-level specs squads build against.

A • Lead → Contract

Turns an inquiry into a reserved unit and a signed sale or lease contract — the commercial heart of the product, connecting CRM, inventory, reservations, and contracts.

ID	Requirement	Pri	Status
LTC-01	Create a customer with required identity/contact fields through the canonical encrypted path.	Must	● Shipped
LTC-02	Import customers via validate → commit steps; invalid rows fail with visible errors.	Should	● Shipped
LTC-03	View customers in Kanban and list with stage filters; PII masked unless permitted + explicitly revealed.	Must	● Shipped
LTC-04	Create/confirm/cancel reservations only for eligible customer/unit combinations, with optimistic UI.	Must	● Shipped
LTC-05	Create sale and lease contracts from customer/unit context; drafts editable, signing irreversible with confirmation.	Must	● Shipped
LTC-06	Signed contract state is visible to payments, invoices, reports, and dashboards.	Must	● Shipped
LTC-07	Automatic Ejar registration on lease signing.	Should	● Planned

Acceptance: a lead moves CRM → reservation → signed contract through visible UI; invalid transitions fail safely; PII stays masked unless authorized; no step depends on a hidden URL.

B • Rent → Invoice (finance & ZATCA)

ID	Requirement	Pri	Status
RTI-01	Generate rent installment schedules from active leases (monthly/quarterly/etc.).	Must	● Shipped
RTI-02	Record full/partial payments, bulk mark-paid, and ledger-style reversals (never destructive delete).	Must	● Shipped

ID	Requirement	Pri	Status
RTI-03	Flag overdue installments on a schedule; surface collected / overdue / due-next.	Must	● Shipped
RTI-04	Generate or link ZATCA tax invoices/receipts by charge classification + buyer data; hold when buyer data missing.	Must	● Shipped
RTI-05	Tenant ZATCA config (EGS, tax mapping) under settings; active config locked, reset via support flow.	Must	● Shipped
RTI-06	Production ZATCA clearance against live Fatoora (production CSID + advisor sign-off + deployed scheduler).	Must	● Gated
RTI-07	Strict PDF/A-3b legal-copy conformance certification.	Should	● Planned

Acceptance: a recorded payment produces the correct collected/overdue state and the right ZATCA document or hold; sandbox issuance clears; tax classification remains advisor-reviewed.

C • Maintenance operations

ID	Requirement	Pri	Status
MNT-01	Create tickets with category, priority, assignment, scheduling, and cost (estimated vs actual).	Must	● Shipped
MNT-02	Track status lifecycle (open → assigned → in-progress → resolved → closed) with SLA-breach visibility.	Must	● Shipped
MNT-03	Preventive-maintenance plans auto-generate recurring work orders by frequency.	Should	● Shipped
MNT-04	Technician seat sees only assigned work — no financial or customer data.	Must	● Shipped
MNT-05	Vendor dispatch + parts inventory.	Should	● Planned

D • B2B marketplace & conveyance

ID	Requirement	Pri	Status
MKT-01	Verified organizations publish units; listings pass a compliance/moderation gate before going live.	Must	● Shipped

ID	Requirement	Pri	Status
MKT-02	Buyer orgs browse/filter, inquire, and convert an inquiry into a reservation + preliminary contract/deal.	Must	● Shipped
MKT-03	Deed proof stores sensitive data encrypted; file upload via authorized, signed-URL access only.	Must	● Shipped
MKT-04	REGA/FAL authorization + platform verification represented in workflow (manual verification).	Must	● Shipped
MKT-05	Atomic cross-org unit transfer behind settlement + legal gates, with kill switch.	Must	● Gated
MKT-06	Unrestricted production launch (platform FAL/license, legal + PDPL sign-off, operating policy).	Must	● External

E • Platform admin, security & billing

ID	Requirement	Pri	Status
PSB-01	Platform console: ARR/MRR, ARR waterfall, AR aging, ZATCA clearance rate, trial-to-paid (system-only).	Must	● Shipped
PSB-02	Subscription lifecycle (trial → active → past-due → paused → canceled) with automated trial expiry + dunning.	Must	● Shipped
PSB-03	Plans, entitlements, coupons, and tokenized payment methods, all org-scoped.	Must	● Shipped
PSB-04	PII encryption + blind-index, token revocation, sign-out-all-devices, append-only audit log.	Must	● Shipped
PSB-05	Data-retention sweeps (PDPL), support tickets, and permission requests.	Must	● Shipped

Compliance built into the data model, not promised on a slide.

System	What's in the product	Status
ZATCA (Phase-2)	In-house engine: UBL, signing, hash chaining, QR; SaaS + tenant issuance; clearance/report cycle	● Shipped ● prod gated
Absher (identity/KYC)	Customer model: nationalId, personType, gender, DOB — encrypted at rest	● Shipped (schema)
MOC (commercial registry)	Organization model: CR, entityType, legalForm, registration status	● Shipped (schema)
REGA	Listing compliance gate + per-org FAL/REGA authorization before conveyance	● Shipped ● conveyance gated
Ejar	Lease carries an Ejar contract id; auto-registration not yet wired	● Planned
NDMO / SDAIA & PDPL	Configurable retention sweeps, append-only audit log, IP-minimized consent log	● Shipped

Honest read on ZATCA & conveyance

The ZATCA engine is code-complete and defaults to [SANDBOX](#); production is one explicit switch but blocks on external prerequisites — production CSID, tax-advisor sign-off, and a deployed scheduler. Marketplace deed conveyance is fully built but ships behind an off-by-default flag pending REGA/legal authorization. These are governance gates, not missing features.

Encrypted, isolated, audited — the trust layer for an enterprise sale.

Encryption & search

Customer PII (phone, email, national ID, DOB, address, document info) is encrypted with AES-256-GCM at rest. HMAC blind-index hashes allow exact search without decrypting.

Tenant isolation

Every record is scoped by `organizationId`; Postgres RLS is enabled on all 60 tables to slam the anon/PostgREST door. One tenant cannot read another's data.

Auditability (PDPL)

An append-only audit log records create/update/delete/PII-read/export with before/after snapshots and IP — retained on a configurable schedule.

Session & access

JWT with instant revocation (token-version bump = sign-out-everywhere), a 3-layer audience guard separating platform staff from tenant data, PII-read gated separately.

Audited, not assumed

June 2026 (v5.6.1 → v5.13.0) closed **19 security findings** across mass-assignment, authorization, supply-chain CVEs, document access, PII encryption, and token hashing — each shipped with regression tests.

The billing machine is built — the price tags are a business decision.

Everything needed to charge is shipped. Prices are DB-configurable and left as founder input, not invented.

Plans & tiers

Three seeded tiers (Starter / Professional / Enterprise) with monthly + annual cycles, free trials, and per-plan entitlements (flags + limits).

Subscription lifecycle

Trialing → active → past-due → paused → canceled, with automated trial expiry, dunning, plan changes, and price-lock at renewal.

Revenue instrumentation

MRR per subscription with monthly snapshots and an ARR waterfall splitting new / expansion / contraction / churn.

Invoicing

SaaS invoices with sequential numbering, 15% VAT, credit notes, and ZATCA fields.

Coupons

Percentage or fixed-amount codes with redemption limits, validity windows, and plan/cycle scoping.

Payment methods

Tokenized cards per org (mada / Visa / Mastercard / Apple Pay) across multiple Saudi gateways.

Pricing — founder input required

Tiers exist; SAR price points, included limits, and trial length are a go-to-market decision to set with the founder — not a code change.

A product that spent its last cycle hardening, not patching.

Version	Theme	Highlight
v5.13.0	Optimistic rendering	Instant mark-paid + reservation-status feedback
v5.12.0	Crypto refactor + deed upload	Shared encryption package; server-authoritative deed upload (SEC-016)
v5.11.0	PII encryption + cleanup	DOB / address / document info encrypted; invitation tokens hashed
v5.7—5.10	Hardening waves A—C	Mass-assignment closed; JWT revocation; CVE patch; signed-URL document access; abuse tests
v5.1—5.6	ZATCA Phase-2 + ally	In-house e-invoicing R1→R5; WCAG label sweep + enforcing lint rule
v5.0.0	Mimarek rebrand	Brand, palette, typography (teal/navy · Tajawal/Satoshi)

Quality gates

Vitest unit + Playwright E2E with CI coverage gates, lint/type/format, and a production-audit gate blocking new critical CVEs.

Stack

Next.js 16, React 19, Tailwind v4, Prisma + Supabase PostgreSQL, NextAuth v5.

Architecture

Turborepo monorepo with shared `@repo/db` · `ui` · `crypto` · `zatca`; server-actions data layer; multi-tenant by design.

What's next is mostly switches and go-lives, not green-field build.

Now

Deploy a hosted environment; flip ZATCA to production once CSID + advisor sign-off + scheduler are in place.

Next

Activate marketplace conveyance after REGA/legal authorization; refresh the public landing page on verified proof.

Later

Ejar registration on lease signing; vendor dispatch + parts inventory; metered entitlements; PDF/A-3b certification.

Exploring

Rebuilt document/attachment product (after the v5.11 vault removal); deeper analytics.

Scorecard — metric definitions (no invented numbers)

Metric	Definition	Baseline
Activation	Orgs completing onboarding + first unit/customer/contract	● founder input
Collection rate	Collected ÷ billed in period	● founder input
Lead → sign duration	Customer creation → signed contract	● founder input
ZATCA clearance rate	Cleared ÷ submitted documents	● founder input
Trial → paid	Trials converting to active subscriptions	● founder input
Net new ARR	New + expansion – contraction – churn	● founder input

Decisions that gate go-to-market.

Topic	Decision required	Owner
ICP priority	Developer, property manager, brokerage, family office, or platform operator first	Founder
Packaging	Which modules belong in Starter / Professional / Enterprise + add-ons	Founder / Product
Pricing	SAR pricing, annual discount, marketplace fee, ZATCA add-on policy	Founder
Compliance posture	Risk tolerance + sign-off owner for ZATCA, REGA/FAL, PDPL, Ejar	Founder / Legal
Marketplace launch	Conveyance: internal pilot, limited beta, or production	Founder / Legal
Deployment	Hosting, production DB region, scheduler, observability	Eng
Customer references	Approved logos, quotes, portfolio sizes for collateral	Founder

The bar any PRD-derived work must clear before it ships.

Product & UX

- Every capability reachable through a visible UI path (no hidden URLs).
- Works in Arabic (RTL) and English (LTR), light and dark.
- Empty / loading / error states handled; friendly, bilingual error copy.

Engineering & security

- Org-scoping + route/action permission on every surface.
- PII through the canonical encrypted path; audit events on sensitive actions.
- Build/lint/type green; unit + E2E coverage; production-audit gate clean.

Evidence discipline & proof index.

Capabilities were verified against source. Demo figures are illustrative; traction and pricing are explicit placeholders. No metric here is invented.

Arabic (RTL) — full right-to-left layout.

Arabic CRM — pipeline mirrored for RTL.

Dark mode — designed, not inverted.
